The amino acid sequence constitutes the protein having hexokinase activity which remains after the protein is treated at 50 degrees C for 30 minutes in liquid state, and which is higher than that of the protein before it is mutated. (I) is used for the detection of creatinine kinase and glucose. This sequence represents the Saccharomyces pastoriamus hexokinase protein which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mutant hexokinase, useful for the detection of creatinine kinase and glucose, comprises a deletion, addition or insertion in the wild-type amino acid sequence -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cynomologous monkey P-glycoprotein (GPP), and an allelic variant of the PGP protein. PGP, and an allelic variant of the PGP protein. PGP, also known as multidrug transporter, MDR1 is a member of the ABC transporter superfamily. The enzyme serves as an efflux pump syporting small molecules across the cell membrane. The invention includes a cynomologous monkey (Macaca fascicularis) PGP coding sequence and protein, and also that of an allelic variant. The PGP polynucleotide sequence is useful for increasing PGP transporter activity in a cell. Antisense sequences of the CDNA are useful for inhibiting PGP transport activity in a mammalian cell. They may also be used for increasing the bioavailability of a drug. The present sequence represents the cynomologous monkey P-glycoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated nucleic acid encoding cynomologous monkey P-glycoprotein (PGP) and homologous PGP polypeptides are useful for predicting bioavailability of compound and increasing PGP transporter activity in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cynomologous monkey; P-glycoprotein; PGP; multidrug transporter; MDR1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 334 VFFSVLIGAFSVGQASPSIEAFANARGAAFEIFKIIDNKPSIDSYSKSGHKPDNIKGNLE 393

                                                                               Best
                                                                                         Query Match
                                                                                                                                           This invention relates to a polynucleotide sequence encoding a cynomologous monkey P-glycoprotein (PGP), and an allelic variant of the PGP protein. PGP, also known as multidrug transporter, MDR1 is a member of the ABC transporter superfamily. The enzyme serves as an efflux pump exporting small molecules across the cell membrane. The invention includes a cynomologous monkey (Macaca fascicularis) PGP coding sequence and protein, and also that of an allelic variant. The PGP polynucleotide sequence is useful for increasing PGP transporter activity in a cell. Antisense sequences of the CDNA are useful for inhibiting PGP transport activity in a mammalian cell. They may also be used for increasing the cynomologous monkey P-glycoprotein variant 2. The protein has an additional 3 amino acids when compared to PGP variant 1 (AABB1065).
                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated nucleic acid encoding cynomologous monkey P-glycoprotein (PGP) and homologous PGP polypeptides are useful for predicting bioavailability of compound and increasing PGP transporter activity in

The sequences can be used in the treatment of cardiovascular, urinary system, reproductive system, immune, respiratory, neurological and gastrointestinal disorders, infections, and particularly cancer, especially testicular cancers. The present sequence is a protein of the

                                       The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a protein of the invention.
                                                                                                                                                                Gaps

Novel polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancers, immundisorders and neuronal disorders -

SEQ ID No 1164; 880pp; English

CC The invention relates to novel isolated polypeptides (I), and CC polynucleotides (II), (II) and the antibody to (I) are useful for CC disgnosing, preventing and treating diseases including immune system CC disorders (e.g. congenital and acquired immunodeficiencies, autoimmune CC transplant rejections and graft versus host disease, infectious diseases (e.g. hepatitis C), bleeding disorders, haemoglobin abnormalities and CC other blood-related disorders (sickle cell anaemia), myeloproliferative CC disorders, primary haematopoietic disorders, hyperproliferative CC disorders (e.g. Gaucher's disease and cancer), neurodegenerative CC disorders (e.g. Alzheimer's disease, Parkinson's disease), chromosomal CC abnormalities (lown syndrome), ischaemic injury (e.g. stroke), renal CC disorders (e.g. glomerulonephittis), cardiovascular disorders, in conditions (e.g. glomerulonephittis), cardiovascular disorders, in conditions and cell proliferation, endocrine disorders, (e.g. arthythmia), respiratory disorders, dermatological disorders (e.g. arthythmia), respiratory disorders, dermatological disorders (e.g. and ison's disease), renarian, endocrine disorders (e.g. arthythmia), respiratory disorders, dermatological disorders (e.g. and ison's disease), renarian, endocrine disorders (e.g. and ison's disease). Addison's disease), reproductive system disorders, gastrointestinal

AAW34998 Ś 밁 뭐 ននននន Query Match Best Local S Matches 20 produced from native cells or from recombinant host cells, especially prokaryotic host cells transformed with a plasmid or virus-derived vector including the endoglucanase DNA (see AAT94206) 24 Endoglucanases (see AAW34986-W35008) are claimed. They can be used to degrade cellulose for the conversion of plant biomass into fuels and chemicals, for use in detergents, textiles, animal feed, waste treatment, and in the fruit juice and brewing industries for (Clone 63GP1), a hydrothermal vent isolate. The endoglucanase is capable of degrading carboxymethylcellulose and of hydrolysing the beta-1,4-glycosidic bonds in cellulose. It has homology to another endoglucanase (see AAW34985) of archaebacterium AEPIIIa. It can be This the clarification and extraction of Claim 1; Fig lN; 164pp; English. beta-1,4-glycosidic bonds in cellulose Endoglucanase(s), useful to degrade N-PSDB; AAT94206. as stimulators of B-cell responsiveness to pathogens, activators of T-cells, to induce higher affinity antibodies, and as a means to induce tumour proliferation in pathologies e.g. acquired immune deficiency syndrome (AIDS).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     polypeptides. The proteins and their associated DNA sequences are used the treatment, prevention and diagnosis of medical conditions caused by the across. The disorders include SAPHO syndrome (synovitis, cane by pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. across is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory presence or absence of P. across in a patient comprises contacting the presence or absence of P. across in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies appecific for P. across proteins. These antibodies can be used to downregulate expression and activity of P. across polypeptides and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SAPHO syndrome: synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay;

PGP, also known as multidrug transporter. MDR1 is a member of the ABC transporter superfamily. The enzyme serves as an efflux pump exporting small molecules across the cell membrane. The invention includes a cynomologous monkey (Macaca fascicularis) PGP coding sequence and protein, and also that of an allelic variant. The PGP polynucleotide sequence is useful for increasing PGP transporter activity in a cell. Antisense sequences of the cDNA are useful for inhibiting PGP transport activity in a mammalian cell. They may also be used for increasing the bicavailability of a drug. The present sequence represents
therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (BLISA).

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel isolated nucleic acid encoding cynomologous monkey P-glycoprotein (PGP) and homologous PGP polypeptides are useful for predicting bioavailability of compound and increasing PGP transporter activity in

                                                                                                                                                             The invention relates to dog P-glycoprotein (PGP) also referred as multidrug transporter (MDR1) and nucleic acids encoding them. The invention also includes fragments and biologically functional variants of dog P-glycoprotein. PGP and their nucleic acids are useful for determining the bioavailability of drugs and for screening PGP inhibitors. They are useful for the diagnosis and treatment of conditions characterised by PGP activity, by reducing or increasing PGP activity in a cell. PGP nucleic acids are useful as antisense oligonucleotides, to induce a PGP (knockout phenotype. They are used to prepare a non-human transgenic animal, which are valuable as genetic models for
                                                                                                 The present sequence is dog P-glycoprotein (PGP). The PGP enzyme functions as an efflux pump exporting small molecules across the cell membrane. This enzyme is a member of the ABC

                                                                                                                                                                                                                           The invention relates to dog P-glycoprotein (PGP) also referred as multidrug transporter (MDR1) and nucleic acids encoding them. The invention also includes fragments and biologically functional variants of dog P-glycoprotein. PGP and their nucleic acids are useful for determining the bioavailability of drugs and for screening PGP inhibitors. They are useful for the diagnosis and treatment of conditions characterised by PGP activity, by reducing or increasing PGP activity in a cell. PGP nucleic acids are useful as antisense oligonucleotides, to induce a PGP (knockout, phenotype. They are used to propare a non-human PGP).
                                                                                                    The present sequence is dog P-glycoprotein (PGP) also referred as genotype C protein. The PGP enzyme functions as an efflux pump exporting small molecules across the cell membrane. This enzyme is a member of the ABC transporter family.
                                                                   Sequence

New dog P-glycoproteins (PGP) and their encoding nucleic acids, useful for determining the bioavailability of drugs and for screening for dog
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to dog P-glycoprotein (PGP) also referred as multidrug transporter (MDR1) and nucleic acids encoding them. The invention also includes fragments and biologically functional variants of dog P-glycoprotein. PGP and their nucleic acids are useful for determining the bioavailability of drugs and for screening PGP inhibitors. They are useful for the diagnosis and treatment of conditions characterised by PGP activity, by reducing or increasing PGP activity in a cell. PGP nucleic are used as oligonucleotide probes. Complements of PGP nucleic acids are useful as antisense oligonucleides, to induce a PGP acids are useful as antisense oligonucleides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is dog P-glycoprotein (PGP) allelic variant. This sequence is also referred as Genotype A protein. The PGP enzyme functions as an efflux pump exporting small molecules across the cell membrane. This enzyme is a member of the ABC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Patten CJ;

New dog P-glycoproteins (PGP) and their encoding nucleic acids, useful for determining the bioavailability of drugs and for screening for dog
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to dog P-glycoprotein (PGP) also referred as multidrug transporter (MDR1) and nucleic acids encoding them. The invention also includes fragments and biologically functional variants of dog P-glycoprotein. PGP and their nucleic acids are useful for determining the bioavailability of drugs and for screening PGP inhibitors. They are useful for the diagnosis and treatment of conditions characterised by PGP activity, by reducing or increasing PGP activity in a cell. PGP nucleic acids are used as oligonucleotide probes. Complements of PGP nucleic acids are useful as antisense oligonucleotides, to induce a PGP 'knockout' phenotype. They are used to prepare a non-human transgenic animal, which are valuable as genetic models for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is dog P-glycoprotein (PGP) allelic variant. This sequence is also referred as Genotype B protein. The PGP enzyme functions as an efflux pump exporting small molecules across the cell membrane. This enzyme is a member of the ABC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ş
                                                                                                                               The invention relates to dog P-glycoprotein (PGP) also referred as multidrug transporter (MDR1) and nucleic acids encoding them. The invention also includes fragments and biologically functional variants of dog P-glycoprotein. PGP and their nucleic acids are useful for determining the bioavailability of drugs and for creatment of conditions characterised by PGP activity, by reducing or increasing PGP activity in a cell. PGP nucleic acids are used as oligonucleotide probes. Complements of PGP nucleic acids are useful as antisense oligonucleotides, to induce a PGP 'knockout' phenotype. They are used to prepare a non-human transgenic animal, which are valuable as genetic models for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New dog P-glycoproteins (PGP) and their encoding for determining the bioavailability of drugs and PGP inhibitors - {\sf PGP}
                       human diseases.
The present sequence is dog P-glycoprotein (PGP) allelic variant.
This sequence is also referred as Genotype D protein. The PGP
enzyme functions as an efflux pump exporting small molecules
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 17; Page 108-110; 111pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 2, Application US/08752447

Patent No. 5994088

GENERAL INFORMATION:
APPLICANT: Mechetner, Eugene
APPLICANT: Roninson, Igor B
TITLE OF INVENTION: Wethods and Reagents for Preparing and
TITLE OF INVENTION: Using Immunoligcal Agents Specific for P-glycoprotein
NUMBER OF SEQUENCES: 2
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                334 VFFSVLIGAFSVGQAŠPSIEAFANARGAAYEIFKIIDNKPSIDSYSKSGHKPDNIKGNLE 393

Setent No. 5858706
GENERAL INFORMATION:
APPLICANT: Ding, Jeak Ling
APPLICANT: Ho, Bow
TITLE OF INVENTION: The Cloned Factor C cDNA of the
TITLE OF INVENTION: Singapore Horseshoe Crab, Carcinoscorpius
TITLE OF INVENTION: Totundicauda and Purification of Factor C Proenzyme
NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             32 WSG--PGCNNRAERYSKCGCSAIHQKGGYDF-SYTGQTAALYNQAGCSGVAHTRFGSS 86

-!- CATALYTIC ACTIVITY: ATP + 3-phospho-D-glycerate = phospho-D-glyceroyl phosphate.
-!- PATHWAY: Second phase of glycolysis; second step.
-!- SUBUNIT: MONOMER (BY SIMILARITY).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Cricetinae;
